

SIH 2026 — Problem Statement Expansion

Problem statements 229 → 240

Background

Smart India Hackathon 2026 has expanded the available problem-statement range from 229 to 240. The update represents **11 new problem statements** now available through the SIH portal, giving student teams more innovation challenge opportunities to explore.

Problem statement range

The expanded range covered by this update is:

Range	Portal update
229 → 240	11 new problem statements

The portal identifies each problem statement with its own SIH code. The reference update highlights the code range **SIH26230 → SIH26240** for tracking and review.

Theme details

The announcement uses a modern dark-mode technology and hackathon visual language:

- **Background:** deep navy / charcoal blue with subtle concentric circles and a thin cyan frame.
- **Primary accent:** vibrant orange, used for the update message, arrows, alerts, and action emphasis.
- **Secondary accent:** cyan / light teal, used for codes, headings, borders, and calls to action.
- **Typography:** clean geometric sans-serif with bold display headings and compact uppercase labels.
- **Information flow:** update → growth → problem codes → portal action → team branding.
- **Tone:** urgent, optimistic, technical, and community-driven.

Recommended action

Teams that have already selected a problem statement should review their choices in the SIH portal and explore the newly available opportunities in the expanded range. Each team should

verify the official portal entry and its full statement before beginning implementation.

This summary is based on the supplied SIH 2026 announcement video. The official SIH portal remains the source of truth for the complete wording, eligibility, constraints, and submission requirements of each individual problem statement.
